

### Kinetics of IL-1-induced TAK1 activation.

TAK1 was immunoprecipitated from lysates of unstimulated HEK293IL-1R cells or from cells treated for the indicated times with IL-1 $\alpha$ . TAK1 kinase activity was determined by radioactive kinase assay using recombinant MKK6 and  $^{32}\text{P}$ -ATP as substrates. Presence of TAK1 and Phospho-TAK1 in immune complexes was validated by western blotting. For more data see (Thiefes et al., EMBO Reports, 2006).
