Faculty 01 – Law

Political Economy of Resource-Based Development Models in the Global South

Type of Module	Profile
Semester / CP	Summer semester / 6 CP
Faculty / chair / department	Public Law and International Law/ Professorship for Peace Research
Module coordinator	Prof. Stefan Peters
Prerequisites for participation	none
Module content	Natural resource-dependence is a common feature of many countries from the Global South. The consequences of natural resource dependence on development are highly controversial. The resource curse debate clearly improved our understanding of the challenges of resource-based development models. However, there are also some shortcomings remaining. In a first step, the seminar will introduce key topics regarding the topic natural resources and development. Afterwards, current debates from rentier theory will be critically discussed. In a third part, the seminar will focus on different case studies of resource-dependent countries from Africa, Asia and Latin America. Based on theoretical insights and empirical findings the seminar will offer a deeper understanding of the particularities and challenges of resource-based development models

Module content	The rise of the platform economy and growing investments in technologies such as Artificial Intelligence and its socioeconomic applications trigger serious discussions about the future. On the one hand, we see concerns about increasing authoritarianism and a "surveillance capitalism", on the other opportunities for increased transparency and inclusive growth. How do governments respond? Which policies and interventions do we currently see globally? What works, what doesn't? The seminar will discuss the latest developments in technology and the changing policy context in an increasingly bifurcated world. We will look at the key theories as well as case studies of Government responses and apply methodologies to assess their impact.
